The membrane (13) has hydrophilic polymer adhered on only internal surface of main body. Hydrophobic polymer is also provided which has adsorption capacity of main film material. Hydrophobicity is maintained at outer surface contacted with process liquid, when process liquid contacts internal surface of main body.

- USE - The membrane is used for medical treatment of renal disease, for concentration and refining of drinks such as beer, juice.

- ADVANTAGE - The membrane improves hydrophilic nature and stabilises adsorption power of main film material. (Dwg.3/3)
